Caylix Announces Canada Wide Integrated Dialup Access Filter

CHILLIWACK, B.C., July 20, 2006 – Today, Caylix Internet Solutions announced the addition of Canada wide filtered 56k dialup Internet access to it's service portfolio. Local access numbers are now available in dozens of areas located in all provinces.

After nearly a year of small scale testing in its local market, they have unveiled their Canada-Wide Dialup & Integrated Filter Access, another product in a long line of anticipated products focused on improving the Internet experience of online users.

Initial delay pays off, making way for other products

Caylix is a specialized Internet Service Provider offering only dialup, high-speed ADSL or wireless filtered connections. Currently ADSL is available in BC and Alberta, with plans underway to launch in Eastern Canada in the near future. Dialup, however, is now available across most of Canada. "Originally we had planned to launch dialup only for Ontario in early 2006, but various other delays and system upgrades pushed this date out to May. We feel that being able to provide national filtered dialup is well worth the wait", says Wim Kerkhoff, partner in Caylix.

Dialup Access

Although many consider dialup to be on its last legs in as a feasible Internet connectivity option, Caylix still believes that there are many rural, outlying areas that have no choice but to use dialup access for years to come. Eventually, the higher speed ADSL, Cable, and Wireless technologies will replace dialup. All Canadians, regardless of location, who want to utilize the best filtering solution can now do so. As higher speed ADSL, Cable, and Wireless technologies are available, users will be able to seamlessly upgrade their filtered Internet connections.

The vast majority of interested Canadians can now benefit from this filter that is much more than just a filter. William Klaassen, also partner in Caylix, says, "This new agreement with our Canada-wide dialup partner opens the door to other interesting products that will be announced as they are ready for market. These products will continue to enhance the great Internet experience that Caylix clients already enjoy today". Stay tuned for other product releases in mid to late 2006.

Filtered and Secure Internet

Customers are preferring ISP level filtering, as it is impossible to bypass and hassle free. There are no additional monthly fees, no software installation is required, and no additional hardware is necessary. All email accounts include free spam and virii filtering. With Caylix, every connection is firewalled – rendering each customer invisible to the Internet and hackers, regardless of whether the customer has a firewall installed or not.

About Caylix Internet Solutions

Caylix's innovative content filtering technologies deliver the safest and cleanest internet experience. Founded in 2005, Caylix partnered up with a Kliksafe, a reputable and successful filtered ISP from The Netherlands, to provide high quality web filtering based on whitelists, blacklists, and dynamic content analysis. All filtering and security is done at the ISP level, resulting in easy and tamperproof filtering.
