

## Dialup - Mac OS X Setup

1. From the *Apple* menu, choose *System Preferences*
2. Click the *Network* icon.
3. Click the arrow box on the *Show* pop-up list and choose *Internal Modem*.
4. Click on the *TCP/IP* tab.
  - Click the arrow box on the *Configure* pop-up list and choose *Using PPP*.
  - In the *Domain Name Servers* box, type in *172.31.252.1*, *64.251.84.12*, and *209.53.200.2*
  - In the *Search Domains* box, type in *caylix.com*.
  - Click on the *PPP* tab.
5. In the *Telephone Number* field, type your *7 or 10 digit Local Dialup Number*
  - In the *Account Name* field, type your *Username*.
  - In the *Password* field, type your *Password*.
  - Check the box next to *Save password*.
  - Click the *PPP Options* button.
6. Check the box next to *Connect automatically when starting TCP/IP applications*.
  - Uncheck the box next to *Prompt to stay connected*.
  - Uncheck the box next to *Disconnect if idle*.
  - Check the box next to *Disconnect when user logs out*.
  - Click the *OK* button.
7. Click on the *Proxies* tab. Type *proxy.caylix.com* into all 6 long textboxes. Type *3128* into all 6 short *Port* textboxes. Then click on the *Modem* tab.
8. Click the arrow box on the *Modem* pop-up list and choose your modem.
  - Click the *Tone* radio button in the *Dialing* area.
  - Check the box next to *Show modem status* in *menu* bar.
  - Click the *Apply Now* button.
  - Close the *Network* window.
